

TRAINING AND CERTIFICATION

AWS Learning Needs Analysis

A tool to assess your cloud skill gaps

Before embarking on your comprehensive cloud skills training journey, find out where your organization currently stands. **The AWS Learning Needs Analysis (AWS LNA) is a data-driven tool that helps you transform your training initiatives into targeted investments that align with your business goals.**

Simply ask your employees to answer a few questions, and AWS experts will help you generate insights from the AWS LNA. You can identify cloud skills gaps across your organizations and teams. With this data, AWS experts can help you build and enact a tailored plan to bridge these gaps, accelerate cloud adoption, and realize the benefits of the AWS Cloud across your organization.

When should I consider the AWS LNA?

While all organizations can benefit from the AWS LNA, the tool is particularly beneficial for companies that:

- Are unsure of which staff members have AWS Cloud skills, and if those skills are sufficient
- Have multiple people or teams to train
- Require data to justify the investment in training

The AWS LNA also helps you assess cloud skills for a wide variety of roles across your organization—from developers and data scientists to managers and executives.

With the analysis, you gain:

- **Clarity:** See who has skills and at what level
- **Scalability:** Collect data from thousands
- **Cost efficiency:** Identify the right staff to train
- **Timeliness:** Prioritize and roll out training by need
- **Data:** Scope and justify your investment

How the AWS LNA works:

The AWS LNA is a free tool that addresses your organizations' skill gaps in three steps

1

Align your business and training goals. Map your desired business outcomes to your internal team or organizational structures, and your current job roles to recommended AWS Cloud roles.

2

Complete the self-assessment survey. Individuals within your organization complete a quick survey to measure their cloud knowledge and skills across multiple areas.

3

Develop organizational and individual training plans. Our experts work with you to create training plans that incorporate your needs, resources, and business priorities.

After you take the AWS LNA, you receive a detailed and comprehensive report. An AWS expert can talk you through a thorough analysis at the company, team, and individual levels that includes an organizational profile, cloud skill heatmaps, and specific training recommendations.

Getting started

The AWS LNA can help you realize your training goals and unlock the benefits of the AWS Cloud by enabling:

- Data-driven planning
- Targeted skills enablement
- Organizational alignment

Get on the path to smarter training and bigger results from the AWS Cloud. Learn more or schedule your AWS Learning Needs Analysis today.
